IN THE CLAIMS

This listing of claims shall replace all prior versions and listings of claims in this application.

1. (Original) A post for use adjacent roadways for supporting an object, the post comprising:

a hollow, continuous sleeve formed of thermoplastic resin, the sleeve having an interior surface; and

a continuous core disposed within the sleeve and generally coextensive with the interior surface of the sleeve, the core being formed at least partially of recycled crumb rubber.

- 2. (Original) The post according to claim 1 wherein the sleeve and core are circular in cross-section and the core is hollow.
- 3. (Original) The post according to claim 1 wherein the thermoplastic resin is high-density polyethylene.
- 4. (Original) The post according to claim 1 wherein the core is formed of at least 10% by weight recycled crumb rubber, the balance being recycled thermoplastic resin.
- 5. (Original) The post according to claim 1 wherein the core is formed of at least 20% by weight recycled crumb rubber, the balance being recycled thermoplastic resin.
- 6. (Original) The post according to claim 1 wherein the object is a highway sign having an area of less than 10 square feet.
- 7. (Original) The post according to claim 1 wherein the sleeve and core are co-Amendment B Page 2^{\perp} of 7^{\perp}

extruded.

- 8. (Original) The post according to claim 1 wherein the post has crash properties conforming to NCHRP Report 350.
- 9. (Original) A post for use adjacent roadways for supporting an object, the post comprising:

a continuous sleeve formed of thermoplastic resin that is circular in cross-section and has an interior surface; and

a continuous hollow core disposed within the sleeve and generally coextensive with the interior surface of the sleeve, the core being formed of a polymer having a composition including at least 10% by weight recycled crumb rubber.

- 10. (Original) The post according to claim 9 wherein the thermoplastic resin is highdensity polyethylene.
- 11. (Original) The post according to claim 9 wherein the polymer contains at least 20% by weight recycled crumb rubber, the balance being recycled thermoplastic resin.
- 12. (Original) The post according to claim 9 wherein the object is a highway sign having an area of less than 10 square feet.
- 13. (Original) The post according to claim 9 wherein the sleeve and core are coextruded.
- 14. (Original) The post according to claim 9 wherein the post has crash properties selected to conform to NCHRP Report 350.

- 15. (Original) The post according to claim 11 wherein the sleeve and core are circular in cross-section.
- 16. (Original) A post for use adjacent roadways, the post comprising:a hollow sleeve formed of high-density polyethylene that is circular in cross-

section and has an interior surface;

a core disposed within the sleeve and generally coextensive with the interior surface of the sleeve, the core being formed of a polymer having a composition including:

at least 10% by weight recycled crumb rubber; and

the balance a low-melt-index polyethylene;

wherein the sleeve and core are co-extruded together to form a continuous post having generally uniform mechanical properties along its length.

- 17. (Original) The post according to claim 16 wherein the post has crash properties selected to conform to NCHRP Report 350.
- 18. (Original) The post according to claim 16 wherein the polymer contains at least 20% by weight recycled crumb rubber, the balance being low-melt-index recycled polyethylene.
- 19. (Original) The post according to claim 16 wherein the post supports a highway sign having an area of less than 10 square feet.
- 20. (Original) The post according to claim 16 wherein the sleeve and core are circular in cross-section and the core is hollow.
